

Submitter: Roger Knudson

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3681

HB 3681 speeds and simplifies outdated rules that delay and prevent new energy transmission creation in Oregon. With exponentially increasing demand for energy, we need speedy improvement to prevent system overload and failure. Now is the time to get this done.

HB 3681 rounds out the essential policies and tools brought forward in this session's special energy transmission package which includes HB 3336 - Grid Enhancing Technologies and HB 3628 - Oregon Electric Transmission Authority. All three bills are essential to keep Oregonians safe from power crises in the years to come.

HB3681 is the result of 18 months of intense committee work. I urge you to support this bill.
