On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB215

We have had over sixty years to address the short comings of commercial nuclear power generation. We still have not done so, despite the efforts of those behind the current effort.

The technical difficulties plus the high costs associated with these efforts should give cause for serious doubts about pursuing this path. Renewables are our best path forward. The energy and resources required to bring to fruition the proposals envisioned by these bills could be much better spent on wind, solar, and geothermal development.
