

Submitter: Stephen Ott

On Behalf Of:

Committee: House Committee On Climate, Energy, and  
Environment

Measure, Appointment or Topic: HB3681

Oregon needs to anticipate the fast increasing need for more energy transmission capacity. Current permitting processes take far too long, and the permitting reform of HB 3681 is greatly needed. Updating and reform is urgently needed to improve energy reliability for current needs and for Oregon's future. This Bill will support and enhance Bills 3336 and 3628. This effort seeks to avoid energy crises in Oregon's future. I urge the passage of HB 3681.
