

Submitter: James Newcomer

On Behalf Of:

Committee: House Committee On Climate, Energy, and  
Environment

Measure, Appointment or Topic: HB3681

I support this bill if it will speed up the permitting process for siting, designing, and building transmission lines in Oregon. I have had experience with the process in the past -- unhappy, so dismal that we lost the project even though we had financial backing -- and I know that speeding up the permitting process will ease many of our problems in getting enough energy to enough customers in Oregon. Please vote YES.
