

Submitter: Jean Lofy

On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB3477

Ice storms with week-long power outages, heat domes, and wildfires leading the world's worst air quality reading for a day. That is what my Portland-area neighborhood experienced in 2020-2021.

Climate change isn't going away. We must do all we can to lessen its cause and mitigate its effects.

This includes updating targets and goals based on current science and global agreements, reducing our dependence on fossil fuels, and supporting HB3477.

Sincerely,

Jean Lofy
