

Submitter: James Buck

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3477

With the climate change denying now occurring with the present administration in the White House and their unwillingness to address this crisis, it is incumbent upon states to support scientific findings regarding climate change and implement realistically what needs to be done to confront it. I urge your support for HB3477 which is urgently needed to address the ongoing challenges affecting climate globally. We owe it not only to future generations of Oregonians but also the rest of humanity globally and other species that have already been heavily impacted detrimentally by mankind's indifference to the crisis.
