

March 12, 2025

Dear Senate Committee on Energy and Environment:

I ask you to vote NO on SB 215, 216, and 635.

I urge you to watch the recent documentary, **ATOMIC BAMBOOZLE: THE FALSE PROMISE OF A NUCLEAR RENAISSANCE**

<https://www.atomicbamboozle.com/> (*Watch for FREE through March with promo code ocf25*). The downside on the technical challenges presented by Small Modular Nuclear Reactors (SMNR's) are clearly discussed in this documentary by Dr. MV Ramana PhD who is a nuclear power expert/scientist. He speaks clearly on the history and current promotion of SMNR's. Regarding SMNR'S, it is well known that these designs were experimented with in the far past. They were abandoned in the past due primarily to economies of scale to produce electricity—it would be too expensive. They later found use in military applications in submarines and so on. However no current SMNR design is operating commercially in the USA and none commercially anywhere else in the world. What is said about safety and efficiency actually has no evidence to support these contentions. They still will produce nuclear waste as well with no known way to store or keep it safe from harming the people and environment in the decades ahead.

Sincerely,
Nancy Morris
