

Submitter: Clair Klock

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3814

Chair Lively and members of the committee,

I'm Clair Klock from Corbett, retired farmer and conservation specialist. I urge your opposition to HB3814. To let one industry be exempt from following water quality and purity standards is absolutely shameful. I am sure there are numerous industries that would fit this same argument. Agricultural, CALFO and other food production industries would like to join this effort. With the decline of the Federal EPA water quality protection under the present federal administration, it is even more vital that Oregon take the obligation to have clean rivers and bays for our children and grandchildren.

Thank you for your time.
