Micromobility

Several years ago, my adult children gave me an e-bike for a birthday present. I was a skeptic at first, since I wasn't sure where e-bikes fit into the transportation system. But after venturing out on rides all across our community, to work, to shop, to visit friends, for recreation and pleasure, I am a huge fan! I heartily support efforts to clarify terminology and road rules, so more folks are able to safely use this convenient mode of travel.

E-bikes allow me so much more access and ease in getting places, since the power assist expands the range I can travel without a car. And being able to take my e-bike on transit even further extends the possibilities.

I choose my e-bike to get exercise, minimize wear and tear on our roads, and reduce pollution to our environment. Plus riding my e-bike always puts a smile on my face.

Please do all you can to ensure folk are well informed and able to safely use this mobility choice.
