Committee: House Committee On Agriculture, Land Use, Natural
Resources, and Water

Measure, Appointment or Topic: HB3786

Money should be put into monitoring costal shores for the benefit of both humans and animals. For humans, it would allow us to tell when a natural disaster will occur before it happens allowing us to move everyone in its path out of the way. For animals it would allow us to monitor the ecosystems and tell whether the animal population is stable which would help us decide which fish and other sea creatures should be "in season" for fishing. This is useful because if a species of fish is fished a lot it could be fished to extinction and then no one could fish that fish. where as if that fish was monitored than it could be put out of season and allowed a recuperating time while another fish was put in season.
