

Submitter: Linda Kelley

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2063

I support the creation of the 11 member Agrivoltaics Task Force staffed by the Department of Land Conservation and Development.

Co-location of agricultural or livestock production alongside or underneath solar panels is an innovative and important step towards our clean energy goals. This clean energy climate solution can offer shade to animals and can be purposed to grow sun sensitive vegetables during hot summer days. This bill offers the necessary support to move this project along and become the new logical norm to support our agricultural sector.
