Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3814

Even without knowing what a "mixing zone" is, I see no reason to carve out an exemption. This sounds like they want to treat their waste by diluting it with fresh water and not treating it at all. The fact that fish and shellfish do not contain the same bacteria ignores the fact that we are protecting the environment and not just ourselves. If these facilities are on land why are they not required to send their waste into the sewer system like everyone else?
