Measure, Appointment or Topic: HB2067

So let me get this straight. The Oregon Landscape Contractors Association (OLCA) and the National Association of Landscape Professionals want us to give them a grant to buy equipment that even they admit is decidedly inferior in both performance and cost. Do we really save enough carbon with this equipment to offset the higher costs, and the resulting higher carbon emissions, from their use? Maybe we should wait for more reliable equipment to become available and save the tax dollars.
