

Submitter: Alexander Macdonald

On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB2067

Please do anything in your power to end the existence of dirty, noisy, polluting, petroleum burning, climate killing, wild life disrupting, work distruping, and overall human disrupting gas powered leaf blowers. You already know all the reasons. Please consider a sound decibel cap on replacement battery leaf blowers. It would be nice if humans could muster the effort to use a rake, but maybe that's asking too much of our lazy souls at this point. Thanks for your consideration.
