On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2067

Gas-powered leaf blowers - their name pretty much says it all. They're using fossil fuels to "blow" nature's fertilizer (decomposed leaves) "elsewhere" (which tends to be, at least eventually, storm drains - leading to water pollution and wasting a valuable resource). And the noise pollution? Unless you live in a very well-insulated bubble, you know the sound is irritating and damaging to human health and wildlife.
