

Submitter: Pamela Fitzpatrick

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2067

Yes, I strongly support HB 2067.

This is clearly "low hanging" fruit for reducing carbon pollution. As you know, the California Air Resources Board estimates that 1 hour of gas powered leaf blowing produces as much carbon pollution as driving a regular car 1,100 miles! That means that, most likely one small, 3 worker landscape business, working one day, produced more carbon pollution than I did when I drove my gas powered car for one year. Amazing is it not?

Establishing a rebate fund to help people transistion OFF GAS POWERED leaf blowers is an extremely wise use of public money.

Thank you for supporting this bill.
