SJR28

Senate Rules...

I worry about the vague SJR 28 (what is "safe?" what is "clean" and what is "healthy?")

SB 762 was to be about "Safe" that fire map has been a disaster.

What is "clean" Since Valdez oil spill we have learned Nature was best able to clean its self than mans attempt to clean up after that spill (true story).

What is "Healthy"... certainly not all the wildfire smoke from sanitation burns, blamed on wildfires. (Oregon's 31 carbon emission is smoke from said wildfires).

I have been watching climate change 67 yrs now.... seems the more it changes the more it is the same to me.

Feb 69 I seen 40 inch of snow... Feb of 72 I walked on a frozen river.... 2024 I seen 3 inch of Ice... this year I see flooding , but I have seen worse (all in the same location). I've seen salmon survive dams for 67 yrs... and 2 yr ago I seen tens of thousands of kokanee die senselessly to save the salmon who have made the migration to the ocean over that dam for 75 + years.

2 yr ago I seen kids in the capitol who believed they would die by 2030 over climate change... appears they have lost hope because of perceived climate change.

Wind Turbines and Solar promise to fill landfills for many years after they die in maybe 20 yrs... (that is not green).

Maybe the climate change in schools have created the mythical testimony below (maybe we should fund a study).
