On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

I'm a lifelong Oregon resident of 70+ years. I've lived through the increase in population, the decrease in natural vegetation and waterways, and the continuing pollution and poisoning of our lands and waters – keeping beavers, safe and alive in these few waters can make a big difference in the area where they are occurring, and may help in the overall recovery of our natural water systems. The few continuing trappers of beaver should find another avenue for their efforts. Let's keep at least some of what we can. This is a no-brainer to support. Please support it.
