Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or
Topic: HB3932

I live along a stream that would support Beaver, and has for many years. I also have a neighbor that wants to blow up the beaver dams. When we get a lot of rain as we frequently do in the Winter in Northwest Oregon, the stream runs brown with mud from erosion for several days. If we allowed the beaver to have their dams, the stream would clear much more quickly, and there would be much less mud running into the Columbia from our little creek
