

Submitter: Eva Eagle

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

Please take a step to improve Oregon's water quality by passing HB3932 to close beaver trapping temporarily where our DEQ has determined that water quality is impaired. This means a third of our stream miles, and they have higher pollution, higher temperatures, and higher sedimentation. Happily, beavers at work can help solve this problem. When they are allowed to thrive in a stream the result is better water quality. I have seen this in action in Central Oregon on preserve lands, and we need to bring the same positive activity to the streams that are suffering.

Thank you for listening! Please help the beavers and you will help our streams.
