On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3422

House committee on climate, energy and environment.

Truly I have to support HB 3422 :)

Christmas Valley gets 9-13 inch of rain a year... and a lot of winter hours of full sun...

Sage Brush can thrive among the solar panels, well at least for the life of a solar Pannel.

I am a 64 yr resident of Willamette valley... when we don't have fog we have clouds.

Ha but up on the hills east of the Willamette valley 2500 ft and above, well a lot of full sun during winter... but then we have a lot of trees up there.

Willamette valley grows crops... we have the infra structure in place to supply water to those crops, would be a shame to tamper with a working plan that has been invested in and improved over 150 yrs.
