Environment

Measure, Appointment or Topic: HB3932

We must protect water quality because of the growing environmental threats, as the people population grows and the beavers disappear. Indigenous people who have inhabited these lands for a long time, know that beavers improve the purity of streams and rivers. I strongly support HB 3932, not just to protect the beavers, but to protect the quality of the water we all use. This is especially important at this time of a Federal Administration that seems determined to undermine long term environmental protections.
