

Submitter: Jill Wyatt

On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB3932

I support HB3932. It uses nature's own engineers to improve aquatic and riparian habitat on impaired waterways on public lands. Beaver harvest will not be changed on private lands where most beaver trapping and hunting occurs. Scientific evidence suggests beaver dam complexes can address most of the impaired waterways (DEQs classification) water quality issues.

I support passage of this bill out of committee to the floor for a vote.
