

Submitter: Jered Evans

On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB3932

The north american model of wildlife management calls for science based management. This is not science based management. Oregon had an abundance of beavers and limiting management on this species will cost taxpayers a lot of money attempting to mitigate the damage they can do to roads, crops, and private as well as public property. Continuing to use science based management is the best option for wildlife management in north America. Let's leave the management of our wildlife to the professionals and not the politicians.

Thank you for your time, Jered Evans
