Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

The beavers that live on our land have made valuable changes over the past nine years since we moved onto our property. Our land and the creek that runs through our property has been positively transformed as a direct result of the beavers and their work. We have seen the return of Cutthroat trout, newts, Red Wing black birds, Blue Herons and rare Wood Duck species. Beavers are a Keystone species and we have been amazed at all the progress they have made and the positive affect their work has had on our land.

Please help protect them.
