

Submitter: Amber Cook

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

I Amber Cook strongly oppose HB3932. Beaver management should remain science-based, not legislatively driven. This bill ignores the expertise of wildlife biologists and the need for balanced, effective management strategies. Beavers play a vital role in ecosystems, but unchecked populations can cause significant damage to infrastructure, waterways, and private property. Proper management, including responsible trapping, is essential to maintaining ecological balance while mitigating conflicts. Decisions should be guided by science and practical experience, not political pressure.
