

Submitter: Donovan Volk

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB1187

I strongly opposed this bill why we all want to do less harm to the planet. We or I should say some blame cows which is a totally bogus claim . We blame cars and trucks etc ..

Even different types of refrigerant gases .

We let one industry go completely in noticed that has litterly exploded in the last 40 years the aviation traffic

Went from maybe 40 to 100 planes a hour to 500 to 1000 flights an hour these plains heat up the atmosphere not to mention satellite launches and who knows what else .

To tax private citizens for commercial issues is wrong and this bill should be opposed and be dropped
