

Submitter:	Liz Olsen
On Behalf Of:	Crematory Operators
Committee:	House Committee On Climate, Energy, and Environment
Measure, Appointment or Topic:	HB3729

HB 3729 - We would really like to have this bill pass so that we are no longer required to get cremations to reach 1850 degrees.

It would save time, money and natural gas. It is very difficult sometimes to get small people or animals up to 1850 degrees so we have to use more gas that is unnecessary in order to reach that temperature.

Lower temperature options would be safer for crematory operators.

Less gas used would be less emissions.

Passing this bill costs nothing to the state, but makes a big difference in the lives of crematory operators.

Please allow this bill to pass. Thank you for your time.
