Measure, Appointment or Topic:

SB210

Considering my multiple military deployments, it was a three month wait to get the mail from a FPO ship. And the same going back. Yes, other demographics for medical necessity exists. All the elderly are priority one. An advance sample ballot would cover the research issue. Using a few special cases does not justify mass mail in ballots.

Either party would like better authentication achieved. In person voting and re-registering every three years would clean and maintain the voter rolls. Having a new signature on file will expedite each ballot verification.

-Death certificates should be calibrated.

-State of legal residence should be calibrated.

-A legitimate holiday can be designated to vote.

-Legal votes will be submitted with ID. Witnessed hand counting is fast and accurate.

-If one person gets away with voting twice; than that cancels a veteran or elderly vote.

I am 100 percent for this bill.
