

By this testimony I submit my strenuous opposition to SB 210. Mail in ballots are very secure, as has been shown in numerous studies. For one example, see the research by the Bipartisan Policy Center (<https://bipartisanpolicy.org/report/mail-voting-is-safe-secure/>), the Brennan Center for Justice, the Postal Inspection Service and many scholarly articles by political scientists.

In addition, states with all mail in ballots have consistently high voter participation, as compared with states where votes are cast in person on election day.

Finally, the recently published statistical analyses done by the Election Truth Alliance and by SMARTelections.us indicate a high likelihood that votes were manipulated in several swing states in the 2024 election, possibly by introduction of an algorithm into the voting machine tabulation systems. This type of manipulation would not be possible for mail in ballots.
