Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3846

So how much is the lease? Has there been any discussion with the federal government? Can the National Forest Service legally lease land they are chartered to manage? And what are the plans once the state takes over management of the land? Are we going to switch to selective logging or start clear cutting everything in site? Without more information, a lot more, I suggest the legislature scrap this idea.
