SB210

Back in 2012, I talked to Bev Harris who made the documentary Hacking Democracy and she informed me about all the voter/election fraud in our state because of mail in ballots. We acted as observers at the time to see how the process works in Tillamook County. We were the first to do that. Our state is considered one of the dirtiest in the country. Since then, there has been enough information to show the blatant flaw of this system and that our votes are not being counted. It's time also for voter ID to make sure only people who are registered to vote and are US citizens have this privilege. My husband and I wholeheartedly support this and it's about time as this issue continues to be swept under the rug at the local, state, and national level. It's time to bring back some accountability to the election process that so many take for granted. We would also like to see paper ballots that are hand counted as Bev Harris showed the problem with our electronic voting machines that can be programmed to change how we vote. We need to restore election integrity in our state, and make sure only American citizens and people who are registered and can prove their identity vote. Thank you.
