Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB1187

I support this bill. We have to be creative and find ways to assist residents in getting millions of homes retrofitted for wildfire. The science-backed home hardening best practices will reduce risk. Grant programs in the West are being planned right now, especially after the Southern California wildfires. This is the time while there is increased support to do the work by property owners and the insurance companies are in control.
