

Submitter: Thomas Busse
On Behalf Of: The Antipsychiatry Movement
Committee: House Committee On Judiciary
Measure, Appointment or Topic: HB2467

The field of psychiatry is a torture chamber guided by pseudoscience.

Big Pharma has brainwashed an entire field of "professionals" to believe "mental illness" is a "chemical imbalance" in order to push pharmaceutical products such as neuroleptics.

In the 1950's and 1960's, neuroleptics were embraced because they were "wonderful chemical lobotomies" at a time when psychosurgery was viewed as good. Today, this is a forgotten history, but in spite of all these "wonderful" products of psychopharmacology the number of long-term mentally disabled has increased from the 1950's.

Investigative Journalist Robert Whittaker has proven that psychopharmacology and especially involuntary psychopharmacology, which this bill pushes, is the problem because the long-term outcome of their administration is inversely proportional to their use. In other words, "psychiatric drugs" are permanently-disabling neurotoxins. For most people suffering "mental illness," a change of environment and socialization is all that is needed for stability. This was proven by Scottish doctor RD Liang.

This bill will hurt Oregonians - but it has an even darker misuse: political punishment. Those who disagree or refuse to use the wrong pronouns or say a vaccine is harmful can be labeled "crazy" by a judge and civilly committed and then given a neurotoxin like Zyprexa to shut them up. Eventually, their "caretakers" will give them Canadian-style "Death with Dignity" worthy of Nazi Aktion T-4.
