

Submitter: Karen Ashikeh
On Behalf Of: Arbor Stattion HomeOwners Assn
Committee: Senate Committee On Energy and Environment
Measure, Appointment or Topic: SB1187

People cannot afford to continue to subsidize fossil fuel subsidies or pollution and health risks from numerous sources. We are paying with our lives and air and water pollution continues from leaking fue tanks around the state, requests for use of electricity resources that burndens consumers, by data centers and expansion of freeways that support increased traffic near our homes and workplaces. The cost of all this pollution must be shared and paid in full by oil and gas companies for our survival as individuals and for Planet health as a whole

This bill is the beginning of incentives for stopping new oil and gas production and is the beginning of phase outs of fossil furels. Charging money and ceasing subsidies for new oil wells and pipelines is the first step toward reducing (mosre costly in every way) reliance on fossil fuels. You do not only help Oregon's citizens from the burden of these costs, an help slow this growing process in the USAm you also help them to BEGIN to plan for a phaseout of their destructive indusdy.

Thank you for taking both the short and long term interest by supporting this bill.
