SB723

I am an engineer for union pacific railroad and a 20 year employee working mountain grade territory. Having 2 man crew is vital to the safe operation of freight trains especially in grade territory for our safety as well as the safety of our community's we live and pass through day and night. 2 person crews are for our safety as well as the publics. I don't want to even think about trying to do what we do with out a 2nd set of eyes and experience to get the job done. We work long hours with no set schedule being on call 24/7
