HB2945

I oppose HB 2945

Electric buses and the required infrastructure would take much needed funds from our school budgets.

Has anyone investigated the financial impacts this will cause? How much does one electric bus cost? How much would the infrastructure cost?

An electric school bus typically costs around \$350,000 to \$400,000, which is significantly higher than traditional diesel buses.

Many school districts are struggling to keep buildings maintained and PERS paid. Lets focus on getting our students the best possible education and not add more burden to already over taxed citizens.
