

Submitter: Genevieve DeGuzman
On Behalf Of:
Committee: Joint Committee On Ways and Means
Measure, Appointment or Topic: HB5006

Co-Chairs Lieber and Sanchez, and members of the committee,

Every year, we are increasingly experiencing more volatile temperatures and weather conditions due to climate change. The heat in the summer is especially dangerous since our current home was not built to handle the longer heat domes that come in the summer months. When I lived in an apartment, our cooling system could not handle the heat and would often break down. I, like many others, had to utilize city cooling centers and find refuge at places like libraries and community centers during the hottest days.

Now that I live in my own home, I've realized how important having a One Stop Shop for resources and information on rebates to encourage owners like myself to upgrade. It is more crucial now especially as household budgets tighten again to keep residents interested and incentivized to upgrade their heating and cooling systems so it's more efficient on the city's energy grid and on resident's pocketbooks.

I am writing to urge you to prioritize protecting our climate progress and continue investing in our climate resilience. We're facing great chaos and uncertainty at the federal level, including attacks on clean air and water, affordable energy, and the integrity of our public lands. If we fail to act and protect our climate progress, it's our frontline communities — people with disabilities, rural families, people of color, and working folks — who will be hurt first and worst. But every Oregonian will feel the impact. Investing in climate resiliency means investing in community resiliency. We all deserve to breathe clean air, drink safe water, and heat and cool our homes without facing outrageous utility bills.

That's why I'm asking you to fund programs that will:

1. Ensure Oregonians can heat and cool their homes affordably – without having to choose between keeping the lights on or putting food on the table:

Heat Pumps (Oregon Dept. of Energy programs) - \$30 million for Rental Home Heat Pump and \$15 million for Community Heat Pump Deployment Programs. For many families, a heat pump can be a lifeline. Heat pumps mean lower utility bills when costs are skyrocketing, safety from deadly heat, and being able to afford and stay in housing. These programs help keep people safe, housed, and secure in their communities.

One Stop Shop 2.0 (HB 3081) - Oregonians need more support navigating all the

programs to upgrade their homes and buildings through incentives and rebates for efficient heat pumps, improved insulation, sturdier doors and windows, and clean electric cooking. One Stop Shop 2.0 will help families get direct assistance from someone in their area to make their home projects more affordable.

2. Ensure our communities are prepared for extreme weather events. Heat domes, wildfires, ice storms, drought, and extreme weather are growing more common and more devastating – and taking a serious toll on our health, safety, and economy:

Community Resilience Hubs (ODHS) - \$10 million for community resilience hubs and networks across the state to coordinate and provide access to resources and services for vulnerable populations during disasters.

Thank you for your time and for investing in a resilient climate future for all of Oregon.
