

Submitter: Cynthia Wells  
On Behalf Of:  
Committee: Joint Committee On Ways and Means  
Measure, Appointment or Topic: HB5006

Co-Chairs Lieber and Sanchez, and members of the committee,

We have no control over climate and statements like 'protecting out climate' make no scientific sense'. We cannot control any aspect of climate since going past the tipping point. We can upgrade our resilience to those changes that are occurring and will continue to escalate. We do not at present have well informed electorate on climate issues nor behaviors that will result in community survival. Few people grow their own food, fewer know how to cook from scratch, baking bread is a hobby not a life skill. Basic tools to survive extremes in both cold and heat are not commonly found in every home. These would be air filters for smoke days, air conditioners for those 113 degree days, pantry's stocked with two weeks of food and water. A portable water filter should be a standard item in you car. Information costs far less than equipment. Bringing on board all of the population to participate in their own resilience should be a key focus of government.

I am writing to urge you to prioritize protecting our climate progress and continue investing in our climate resilience. We're facing great chaos and uncertainty at the federal level, including attacks on clean air and water, affordable energy, and the integrity of our public lands. If we fail to act and protect our climate progress, it's our frontline communities — people with disabilities, rural families, people of color, and working folks — who will be hurt first and worst. But every Oregonian will feel the impact. Investing in climate resiliency means investing in community resiliency. We all deserve to breathe clean air, drink safe water, and heat and cool our homes without facing outrageous utility bills.

That's why I'm asking you to fund programs that will:

1. Ensure Oregonians can heat and cool their homes affordably – without having to choose between keeping the lights on or putting food on the table:

Heat Pumps (Oregon Dept. of Energy programs) - \$30 million for Rental Home Heat Pump and \$15 million for Community Heat Pump Deployment Programs. For many families, a heat pump can be a lifeline. Heat pumps mean lower utility bills when costs are skyrocketing, safety from deadly heat, and being able to afford and stay in housing. These programs help keep people safe, housed, and secure in their communities.

One Stop Shop 2.0 (HB 3081) - Oregonians need more support navigating all the programs to upgrade their homes and buildings through incentives and rebates for

efficient heat pumps, improved insulation, sturdier doors and windows, and clean electric cooking. One Stop Shop 2.0 will help families get direct assistance from someone in their area to make their home projects more affordable.

2. Ensure our communities are prepared for extreme weather events. Heat domes, wildfires, ice storms, drought, and extreme weather are growing more common and more devastating – and taking a serious toll on our health, safety, and economy:

Community Resilience Hubs (ODHS) - \$10 million for community resilience hubs and networks across the state to coordinate and provide access to resources and services for vulnerable populations during disasters.

Thank you for your time and for investing in a resilient climate future for all of Oregon.

Cynthia Sells,  
Eugene, OR
