Committee: House Committee On Behavioral Health and Health Care

Measure, Appointment or Topic: SB951

I support the passage of bill. Patients don't benefit from having corporations managing their medical care. It would result in increased costs in medical care, intervening in physicians would not be able to provide the best care for each individual patient's needs based on their condition (and not based on cost set by corporation). The revision of our current OCPM will ensure that physical maintain autonomy in their practices and Oregonians receive access to high quality care.
