

Submitter: John Livingston

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: SB685

Transparency is really important to the functioning of our government. We need the utilities to be transparent to all customers and the general public on the effects of adding hydrogen to the gas lines. There should be mandatory public notice if hydrogen is blended into home gas lines and there needs to be PUC oversight to protect ratepayers. Many industries use advertising to say they are doing a lot for protecting us and how they are reducing greenhouse gasses in their mining and delivery of gas. We need new safety and climate reporting to prevent corporate greenwashing. Please pass this bill.
