

Submitter: Anne Millhollen

On Behalf Of:

Committee: Senate Committee On Natural Resources and
Wildfire

Measure, Appointment or Topic: HB3932

Beaver dams improve water quality. Many of our streams in public lands are considered impaired because of the level of pollutants and sediment. Beaver dams slow the flow of streams allowing sediment to settle, and pollutants are filtered out as the water passes through the dams. Allowing the population of beaver to grow in public lands is a very inexpensive way to improve water quality. Please support HB 3932.

Thank you for your time.
