

Submitter: Theodore Weis

On Behalf Of:

Committee: Senate Committee On Natural Resources and
Wildfire

Measure, Appointment or Topic: HB3932

In all water on oregon for decades past there has been no shortage in the beaver population even when beaver fur prices where high and they were trapped in good numbers but that was close to 50 years ago.

Now they are not trapped in big numbers and they are going past a good carrying capacity in a great many areas causing crop damage field and road flooding and habitat destruction. This measure is not good science. It is animal rights trying g to get there foot in the door to completely stop ethical trapping we now haw in this state. I oppose any measure like this that does not have very good science to back it up as all antitrapping don't have

Theodore Weis
