

Submitter:	Jamie Holly
On Behalf Of:	HB3932
Committee:	Senate Committee On Natural Resources and Wildfire
Measure, Appointment or Topic:	HB3932

Beavers are a well adapted and important species within a riparian ecosystem. Going unregulated will only lead to an imbalance and cause degradation to streams and ponds. Beavers are most often controlled within or in extreme proximity to the wetland riparian area and a 200 feet from the high water mark puts many control methods at a severe disadvantage. This is why I urge OPPOSITION to the bill.
