RE: Supporting HB 3932

Please vote to close beaver hunting and trapping in waterways on public lands.

Beavers are ecosystem engineers. Please vote to allow beavers to continue to improve water quality and restore habitat, especially the over 100,000 miles of Oregon's waterways are in poor health.

There is robust scientific evidence that shows beaver dam complexes can address most of these water quality issues. And they do it for FREE!

We've seen the positive impacts of beaver restoration in the Tualatin River watershed. I hope you will support nature's engineers to continue their positive impacts on our watersheds by voting YES on HB 3932.

Thank you.
