Measure, Appointment or Topic:

HB3824

PTs should not be able to use filiform needle with a minimal training of six hours. This practice set an unsafe precedent for patients and takes away from practitioners who have thousands of hours both in school and out of practicing acupuncture. This addition to PTs scope of practice would be dangerous to patients, put PTs medical license at risk as well as malpractice insurance would surely have more claims made against PTs. Do not allow for people that are not trained correctly be able to use insertive methods with their patients.
