

Submitter: D. Clark
On Behalf Of:
Committee: House Committee On Climate, Energy, and Environment
Measure, Appointment or Topic: SB685

I'm concerned about NW Natural blending hydrogen into Portland's gas supply without customer notification. It's disturbing that this isn't legally required. Customers have a right to know what's piped into their homes, and regulators need the power to protect us.

This blending may pose health and safety risks, including increased pollution and leaks. I urge your support for SB 685, which ensures transparency and safety by requiring NW Natural to:

- Notify customers and the Public Utility Commission before increasing hydrogen blending above 2.5%.
- Maintain website information about their hydrogen blending program and customer communication channels.

SB 685 is crucial for transparency, safety, and our environment. Please take action to support it.
