

Submitter: Andrew Simrin
On Behalf Of:
Committee: Senate Committee On Natural Resources and
Wildfire
Measure, Appointment or Topic: HB3932

Dear Chair Golden and members of the committee,
I live near the banks of the Willamette like many in the state, and the waterway is good potential habitat for our state animal, the American Beaver, to do active work during these tough environmental conditions. I frequently traverse the public lands and waterways in Oregon.

I write to ask that you please support HB 3932 to allow beavers to help restore Oregon's thousands of miles of impaired waterways.
Beavers are ecosystem engineers. Their natural behaviors including canal-digging and dam-building, help slow water flow, restore impacted water tables and underground aquifers, establish natural wetlands that filter toxins, and create wildlife and fish habitat all at once.
According to the Department of Environmental Quality, over 100,000 miles of Oregon waterways suffer from poor water quality. DEQ is tasked with restoring these waterways but lacks the resources to do so at the scale needed. This is where beavers can help — for free!??
- Passing HB 3932 will allow beavers to help restore these waterways by closing hunting and trapping of beavers on these impaired waterways on public lands.

Robust scientific evidence shows that beaver dam complexes can address most of these concerning water quality. This bill is not about limiting beaver harvest or increasing beaver population, but it will enable beavers to access waterways where they need to be and remain long enough to perform their ecosystem functions.
Please support HB 3932 — a natural and low-cost solution to our state's water quality crisis.
Thank you for the opportunity to provide input.
