

Submitter: Pamela Fitzpatrick

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: HB3336

I strongly support HB 3336 (Grid Enhancement Technologies-GETs). HB 3336 helps protect local communities who depend on investor-owned utilities for their electricity. This one additional section added to the current requirements means that utilities must utilize all cost-effective solutions to increase their grid capabilities. We clearly need increased grid capabilities and the fact that investor-owned utilities can pass the expense of expansion on to rate-payers requires there be additional oversight protection.

Thank you for developing this bill.
