Measure, Appointment or Topic:

SB1153

I support this bill in its entirety.

We need thoughtful progression in the use of a dwindling and chronically degrading quality resource.

In the future wars will be fought over water and we need equitable plans to conserve the special pristine waters that exist in our mountains and aquifers.

Factory farms and wasteful legacy ranchers cannot be allowed to buy and lobby our waterways into oblivion.

Water treatment and waste treatment need better than "dilution is the solution, to pollution" and trust me, they REALLY believe that crap.

We need to protect our streams and wetlands from herbicides, pesticides, and rodenticides, as well as fire retardant "forever chemicals" that are being used to stop the destruction caused by wildfires unleashed in invasive species of genetically modified fir plantations.

Our agricultural practices are our biggest barrier to plentiful and safe drinking water. Thank you for considering public comment on this very fundamental right of future generations to safe and abundant drinking water.
